

## Resultados completos de las simulaciones numéricas

Los resultados completos de las simulaciones numéricas se presentan de la siguiente manera:

- La tabla 1.1. recoge los resultados completos del *Caso básico*, a partir del cual se ha realizado la estática comparativa.
- Así, respecto del *Caso básico*, las tablas 1.2 y 1.3 recogen aquellas situaciones en las que la propensión intrínseca a litigar ( $Q$ ) pasa a ser 1,2 y 3,5, respectivamente.
- Las tablas 2.1. y 2.2. recogen valoraciones del “efecto disuasión” ( $K$ ) de 0,5 y 5, respectivamente.
- Las tablas 3.1. y 3.2. presentan los resultados según sean los costes unitarios de la Administración de Justicia ( $caj$ ), o bien 75.000 o 25.000, respectivamente.
- Las tablas 4.1. y 4.2. recogen los resultados según sea el método de pago a los abogados; así, en el primer caso, suponemos que el porcentaje de participación del abogado en el resultado del proceso es máximo ( $a=1$ ), mientras que en el segundo caso, la participación es del 0,25.
- Las tablas 5.1. y 5.2. recogen los resultados según cuáles sean los costes unitarios de los abogados ( $ca$ ), 10.000 y 3.000, respectivamente.
- Las tablas 6.1. y 6.2. presentan los resultados ante variaciones en el nivel mínimo de retraso en las decisiones judiciales ( $gb$ ), 0,5 y 0,99, respectivamente.
- Finalmente, en las tablas 7.1. y 7.2., se recogen los resultados de acuerdo con dos valoraciones marginales de los fondos públicos obtenidos con la tasa ( $r$ ), 0,5 y 2, respectivamente.
